Preface	xi
<b>I Introduction</b>	<b>15</b>
<b>1 Continuous matter</b>	<b>1</b>
1.1 Molecules . . . . .	2
1.2 The continuum approximation . . . . .	4
1.3 Newtonian mechanics . . . . .	7
1.4 Continuum physics . . . . .	8
<i>Problems</i> . . . . .	12
<b>2 Space and time</b>	<b>13</b>
2.1 Reference frames . . . . .	14
2.2 Time . . . . .	14
2.3 Space . . . . .	15
2.4 Vector calculus . . . . .	18
2.5 Cartesian coordinate transformations . . . . .	23
2.6 Scalars, vectors, and tensors . . . . .	26
2.7 Curvilinear coordinates . . . . .	30
<i>Problems</i> . . . . .	34
<b>3 Gravity</b>	<b>39</b>
3.1 Mass density . . . . .	40
3.2 Gravitational acceleration . . . . .	42
3.3 Sources of gravity . . . . .	45
3.4 Gravitational potential . . . . .	48
3.5 Potential energy . . . . .	51

<i>Problems</i> . . . . .	54
<b>II Hydrostatics</b>	<b>57</b>
<b>4 Fluids at rest</b>	<b>59</b>
4.1 Pressure . . . . .	60
4.2 Hydrostatic equilibrium . . . . .	65
4.3 The equation of state . . . . .	68
4.4 Compressibility . . . . .	70
4.5 Thermodynamics of ideal gases at rest . . . . .	73
4.6 The homentropic atmosphere . . . . .	78
<i>Problems</i> . . . . .	82
<b>5 Buoyancy</b>	<b>85</b>
5.1 Archimedes' principle . . . . .	86
5.2 The art of ballooning . . . . .	88
5.3 Stability of floating bodies . . . . .	89
5.4 Ship stability . . . . .	92
<i>Problems</i> . . . . .	98
<b>6 Planets and stars</b>	<b>101</b>
6.1 Gravitational flux . . . . .	102
6.2 Spherical bodies . . . . .	105
6.3 The homentropic star . . . . .	107
6.4 Field energy . . . . .	112
<i>Problems</i> . . . . .	115
<b>7 Hydrostatic shapes</b>	<b>117</b>
7.1 Fluid interfaces in hydrostatic equilibrium . . . . .	118
7.2 Shape of rotating fluids . . . . .	121
7.3 The Earth, the Moon and the tides . . . . .	123
7.4 Shape of a rotating fluid planet . . . . .	128
7.5 Surface tension . . . . .	133
7.6 Planar capillary effect . . . . .	138
7.7 Rotationally invariant shapes . . . . .	139
<i>Problems</i> . . . . .	143
<b>III Deformable solids</b>	<b>145</b>
<b>8 Stress</b>	<b>147</b>
8.1 Friction . . . . .	148
8.2 Internal stresses . . . . .	149
8.3 Nine components of stress . . . . .	151
8.4 Mechanical equilibrium . . . . .	154

8.5 “Proof” of symmetry of the stress tensor . . . . .	157
<i>Problems</i> . . . . .	159
<b>9 Strain</b>	<b>161</b>
9.1 Displacement . . . . .	162
9.2 Local deformation . . . . .	164
9.3 Geometrical meaning of the strain tensor . . . . .	168
9.4 Work and energy . . . . .	170
9.5 Finite local deformation . . . . .	171
<i>Problems</i> . . . . .	174
<b>10 Linear elasticity</b>	<b>177</b>
10.1 Hooke’s law . . . . .	178
10.2 Hooke’s law in isotropic materials . . . . .	180
10.3 Static uniform deformation . . . . .	184
10.4 Energy of deformation . . . . .	186
<i>Problems</i> . . . . .	190
<b>11 Solids at rest</b>	<b>193</b>
11.1 Equations of elastostatics . . . . .	194
11.2 Standing up to gravity . . . . .	196
11.3 Bending a beam . . . . .	199
11.4 Twisting a shaft . . . . .	202
11.5 Tube under pressure . . . . .	204
11.6 Elastic spherical shell . . . . .	210
<i>Problems</i> . . . . .	214
<b>12 Elastic vibrations</b>	<b>217</b>
12.1 Elastic waves . . . . .	218
12.2 Free elastic waves . . . . .	219
12.3 Rayleigh waves . . . . .	223
12.4 Radial waves . . . . .	225
<i>Problems</i> . . . . .	227
<b>13 Numeric elastostatics</b>	<b>229</b>
13.1 Relaxing towards equilibrium . . . . .	230
13.2 Discretization of space . . . . .	231
13.3 Gravitational settling in two dimensions . . . . .	234
<i>Problems</i> . . . . .	239
<b>IV Basic fluid dynamics</b>	<b>241</b>
<b>14 Fluids in motion</b>	<b>243</b>
14.1 The velocity field . . . . .	244
14.2 Visualization of flow patterns . . . . .	248

14.3 Mass conservation . . . . .	250
14.4 Continuum dynamics . . . . .	254
14.5 Little bangs and Big Bang . . . . .	256
14.6 Newtonian cosmology . . . . .	258
<i>Problems</i> . . . . .	263
<b>15 Nearly ideal flow</b>	<b>265</b>
15.1 The Euler equation . . . . .	266
15.2 Small-amplitude sound waves . . . . .	267
15.3 Steady incompressible flow . . . . .	269
15.4 Steady compressible flow . . . . .	275
15.5 Vorticity . . . . .	281
15.6 Steady, incompressible potential flow . . . . .	284
15.7 Circulation . . . . .	290
<i>Problems</i> . . . . .	293
<b>16 Global laws of balance</b>	<b>295</b>
16.1 Connected tubes . . . . .	296
16.2 Overview of the global laws . . . . .	297
16.3 The control volume . . . . .	298
16.4 Mass balance . . . . .	300
16.5 Momentum balance . . . . .	300
16.6 Reaction forces . . . . .	304
16.7 Angular momentum balance . . . . .	310
16.8 Reaction moments . . . . .	313
16.9 Kinetic energy balance . . . . .	320
16.10 Mechanical energy balance . . . . .	324
16.11 Energy balance in an elastic fluid . . . . .	326
<i>Problems</i> . . . . .	329
<b>17 Viscosity</b>	<b>331</b>
17.1 Shear viscosity . . . . .	332
17.2 Velocity-driven planar flow . . . . .	335
17.3 Incompressible Newtonian fluids . . . . .	338
17.4 Classification of flows . . . . .	342
17.5 Compressible Newtonian fluids . . . . .	346
17.6 Viscous attenuation of sound . . . . .	347
<i>Problems</i> . . . . .	351
<b>18 Channels and pipes</b>	<b>353</b>
18.1 Steady, incompressible flow . . . . .	354
18.2 Planar geometry . . . . .	355
18.3 Pressure driven flow between fixed plates . . . . .	356
18.4 Gravity driven flow with an open surface . . . . .	358
18.5 Tubular geometry . . . . .	359
18.6 Laminar pipe flow . . . . .	360

18.7 Phenomenology of turbulent pipe flow . . . . .	365
18.8 Down the drain, again . . . . .	369
18.9 Circulating cylindrical flow . . . . .	371
18.10 Couette flow between rotating cylinders . . . . .	373
18.11 Secondary flow and Taylor vortices . . . . .	377
<i>Problems</i> . . . . .	380
<b>19 Creeping flow</b>	<b>383</b>
19.1 Steady incompressible creeping flow . . . . .	384
19.2 Stokes' solution for a sphere . . . . .	385
19.3 Beyond Stokes' law . . . . .	389
19.4 Beyond spherical shape . . . . .	392
<i>Problems</i> . . . . .	394
<b>20 Rotating fluids</b>	<b>397</b>
20.1 Fictitious forces . . . . .	398
20.2 Flow in a rotating system . . . . .	401
20.3 Geostrophic flow . . . . .	403
20.4 The Ekman layer . . . . .	406
20.5 Steady vortex in rotating container . . . . .	410
20.6 Debunking an urban legend . . . . .	414
<i>Problems</i> . . . . .	415
<b>21 Computational fluid dynamics</b>	<b>417</b>
21.1 Unsteady, incompressible flow . . . . .	418
21.2 Temporal discretization . . . . .	420
21.3 Spatial discretization . . . . .	421
21.4 Channel entrance flow . . . . .	426
<i>Problems</i> . . . . .	433
<b>V Special topics</b>	<b>435</b>
<b>22 Small-amplitude surface waves</b>	<b>437</b>
22.1 Basic physics of surface waves . . . . .	438
22.2 Small-amplitude gravity waves . . . . .	444
22.3 Wave energy and momentum . . . . .	449
22.4 Surface tension . . . . .	454
22.5 Internal waves . . . . .	459
22.6 Attenuation of small-amplitude waves . . . . .	463
22.7 Statistics of wind-generated ocean waves . . . . .	465
<i>Problems</i> . . . . .	469

<b>23 Whirls and vortices</b>	<b>473</b>
23.1 Basic vortex dynamics . . . . .	474
23.2 Free cylindrical vortices . . . . .	476
23.3 Steady vortex sustained by secondary flow . . . . .	479
23.4 Advectional spin-up of a cylindrical vortex . . . . .	482
23.5 Bathtub-like vortices . . . . .	484
<i>Problems</i> . . . . .	490
<b>24 Lubrication</b>	<b>493</b>
24.1 Lift and drag near a boundary . . . . .	494
24.2 Flow in a narrow gap . . . . .	497
24.3 Flat wing . . . . .	500
24.4 Loaded journal bearing . . . . .	503
<i>Problems</i> . . . . .	507
<b>25 Boundary layers</b>	<b>509</b>
25.1 Physics of boundary layers . . . . .	510
25.2 Growth of a boundary layer . . . . .	515
25.3 Boundary layer theory . . . . .	517
25.4 Laminar boundary layer in uniform flow . . . . .	519
25.5 Turbulent boundary layer in uniform flow . . . . .	522
25.6 Boundary layers with varying slip-flow . . . . .	527
25.7 Boundary layer separation . . . . .	530
25.8 Locating the Goldstein singularity . . . . .	532
<i>Problems</i> . . . . .	539
<b>26 Subsonic flight</b>	<b>543</b>
26.1 Aircraft controls . . . . .	544
26.2 Aerodynamic forces and moments . . . . .	547
26.3 Steady flight . . . . .	548
26.4 Estimating lift . . . . .	552
26.5 Estimating drag . . . . .	558
26.6 Lift, drag, and the trailing wake . . . . .	563
26.7 Lift in two-dimensional airfoil theory . . . . .	569
26.8 The distant laminar wake . . . . .	574
<i>Problems</i> . . . . .	580
<b>27 Heat</b>	<b>583</b>
27.1 Energy balance . . . . .	584
27.2 Heat equation for isotropic matter at rest . . . . .	587
27.3 Heat equation for fluids in motion . . . . .	592
27.4 Advectional cooling or heating . . . . .	595
<i>Problems</i> . . . . .	600

<b>28 Convection</b>	<b>601</b>
28.1 Convection . . . . .	602
28.2 Convective instability . . . . .	608
28.3 Linear stability analysis of convection . . . . .	611
28.4 Rayleigh-Bénard convection . . . . .	614
<i>Problems</i> . . . . .	622
<b>29 Nonlinear waves</b>	<b>625</b>
29.1 Hydraulic jumps . . . . .	626
29.2 Normal shocks in ideal gases . . . . .	632
29.3 Shit . . . . .	635
29.4 Nonlinear surface waves . . . . .	636
29.5 The shallow-water approximation . . . . .	638
29.6 Nonlinear deep-water gravity waves . . . . .	639
<i>Problems</i> . . . . .	643
<b>30 Turbulence</b>	<b>645</b>
<b>A Units and constants</b>	<b>647</b>
<b>B Newtonian particle mechanics</b>	<b>649</b>
B.1 Dynamic equations . . . . .	650
B.2 Force and momentum . . . . .	650
B.3 Moment of force and angular momentum . . . . .	652
B.4 Power and kinetic energy . . . . .	653
B.5 Internal and external forces . . . . .	654
B.6 Hierarchies of particle interactions . . . . .	655
<i>Problems</i> . . . . .	656
<b>Answers to problems</b>	<b>657</b>
1 Continuous matter . . . . .	657
2 Space and time . . . . .	658
3 Gravity . . . . .	659
4 Fluids at rest . . . . .	662
5 Buoyancy . . . . .	664
6 Planets and stars . . . . .	667
7 Hydrostatic shapes . . . . .	668
8 Stress . . . . .	669
9 Strain . . . . .	671
10 Elasticity . . . . .	672
11 Solids at rest . . . . .	673
12 Vibrations . . . . .	674
13 Numeric elastostatics . . . . .	674
14 Matter in motion . . . . .	675
15 Nearly ideal flow . . . . .	676
16 Laws of balance . . . . .	678

17	Viscosity . . . . .	681
18	Plates and tubes . . . . .	683
19	Creeping flow . . . . .	685
20	Rotating fluids . . . . .	687
21	Computational fluid dynamics . . . . .	688
22	Surface waves . . . . .	689
23	Whirls and vortices . . . . .	692
24	Lubrication . . . . .	694
25	Boundary layers . . . . .	695
26	Aerodynamics . . . . .	696
27	Heat . . . . .	698
28	Convection . . . . .	698
29	Nonlinear waves . . . . .	700
30	Turbulence . . . . .	700
